After all that run around, what caused 500ms disk latency even when we replaced physical server? Slight unbalance in rack causing vibration.

@kellabyte That and all the yak hair clogging up the fans causing everything to overheat ;)

Adam Leventhal @ahl · Nov 14, 2014

@scottmarkwell @kellabyte We once saw a disk showing weird latency outliers; 3 screws had wiggled loose; it was flopping like a gaffed fish

@kellabyte @krarick before I got to the end of the tweet I thought it was going to be vibration caused by sound/noise
